BNS parameter space

Parameters:

- Mass M
- Mass ratio q
- Spin \vec{S}^A, \vec{S}^B
- EOS

BNS parameter space

Parameters:

- Mass M
- Mass ratio q
- Spin \vec{S}^A, \vec{S}^B
- EOS

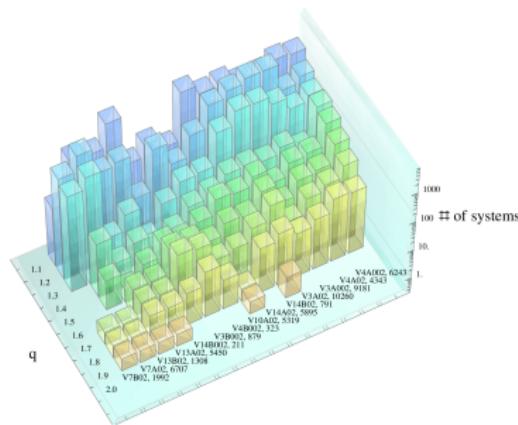

BNS parameter space

Parameters:

- Mass M
- Spin \vec{S}^A, \vec{S}^B
- Mass ratio q
- EOS

Mass ratio: most observed BNS have comparable masses around $\sim 1.35 M_{\odot}$
in situ models predict mass ratios up to $q = \approx 1.8$

\Rightarrow high-mass ratios are possible

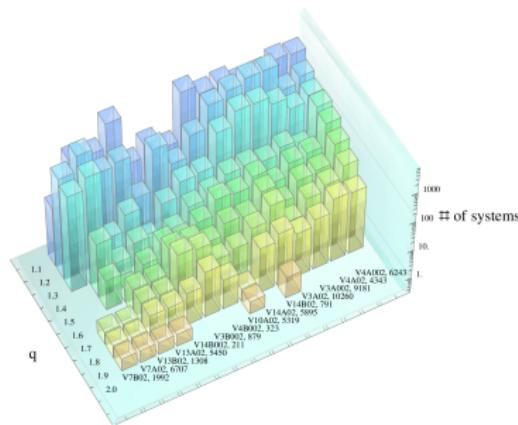

BNS parameter space

Parameters:

- Mass M
- Mass ratio q
- Spin \vec{S}^A, \vec{S}^B
- EOS

Mass ratio: most observed BNS have comparable masses around $\sim 1.35 M_{\odot}$
in situ models predict mass ratios up to $q = \approx 1.8$

\Rightarrow high-mass ratios are possible

Spin:

single NS observed up to 716Hz
($\chi \sim 0.3 - 0.6$)
BNS observed up to 44Hz

\Rightarrow NS are spinning objects

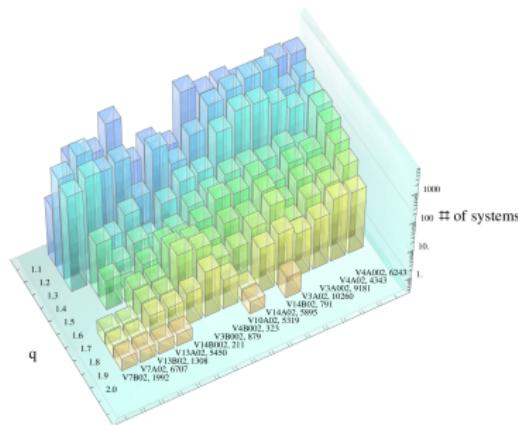

BNS parameter space

Parameters:

BNS observed up to 44Hz

\Rightarrow NS are spinning objects

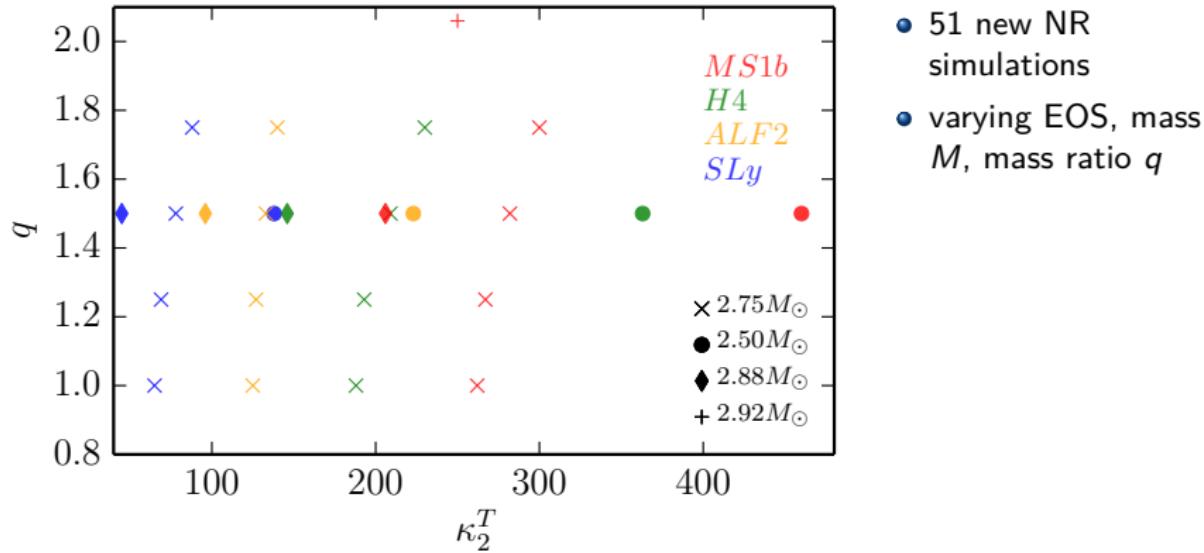

Upgrade of W.Tichy's SGRID code, [Tichy, 2009]

high mass-ratio, eccentric, spinning systems [Dietrich et al, 2015]

Effect of the mass-ratio

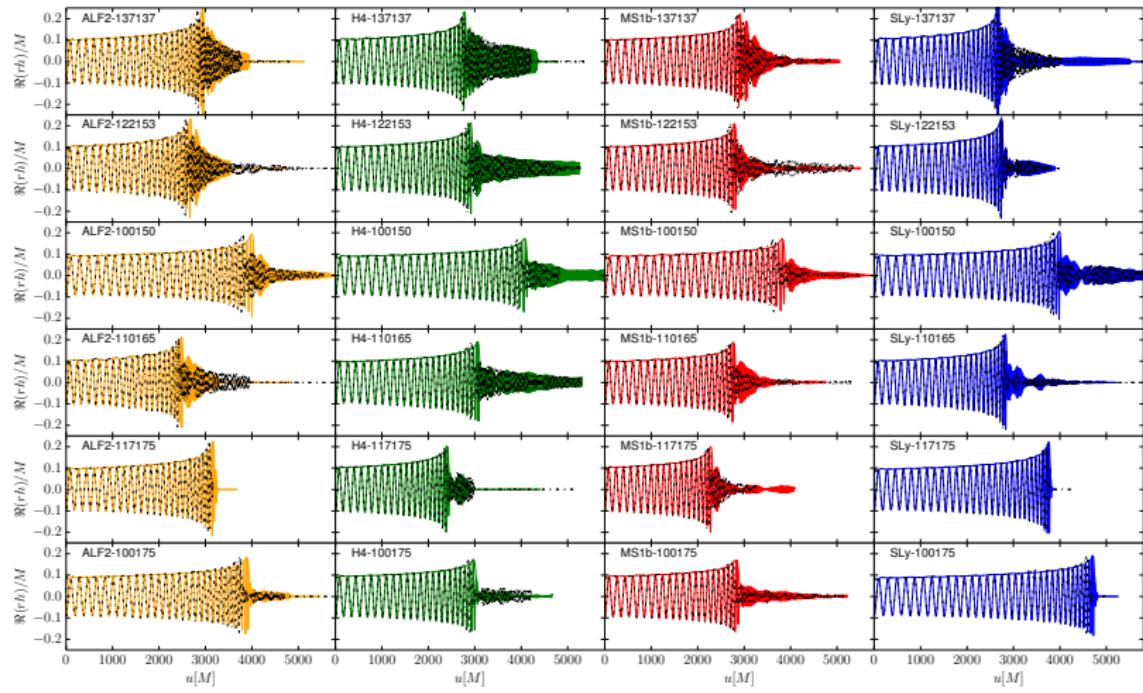

Effect of the mass-ratio

$$q := M_A/M_B$$

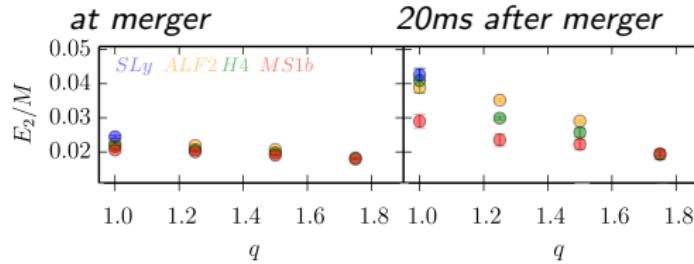

$$\kappa_2^T = 2 \left(\frac{q^4}{(1+q)^5} \frac{k_2^A}{C_A^5} + \frac{q}{(1+q)^5} \frac{k_2^B}{C_B^5} \right)$$

Effect of the mass-ratio:GW signal

Effect of the mass-ratio:GW signal

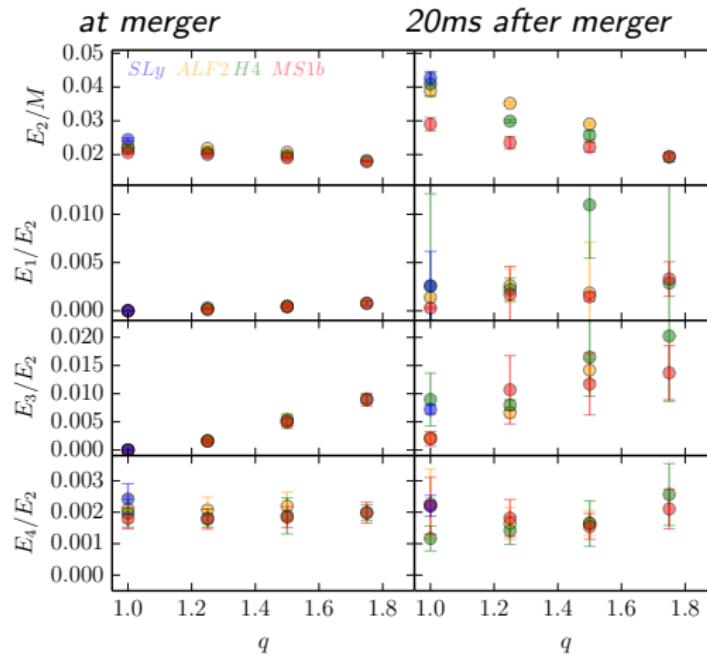

Amount of radiated energy

- released energy decreases for increasing q
- subdominant modes become important for increasing q
- excitation of all modes in postmerger independent of q

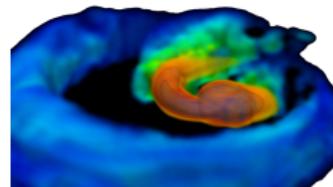

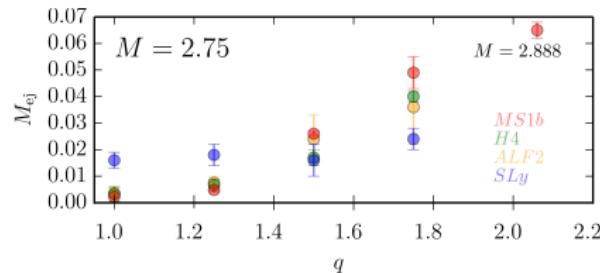

Effect of the mass-ratio:GW signal

Amount of radiated energy

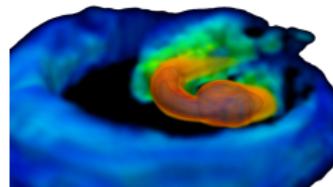

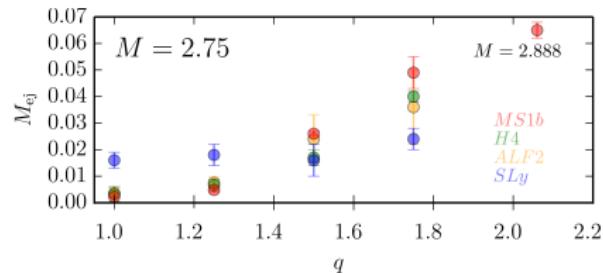

- released energy decreases for increasing q
- subdominant modes become important for increasing q
- excitation of all modes in postmerger independent of q

Effect of the mass-ratio:Ejecta

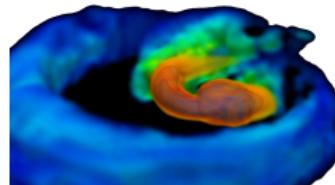

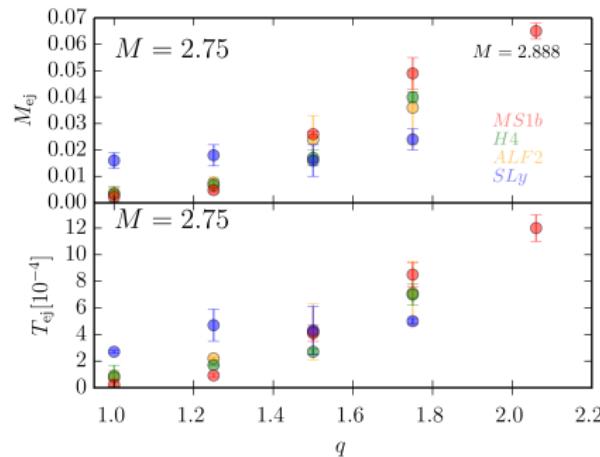

- ejecta mass almost linear in q
- kinetic energy almost linear in q
- ejecta velocity in orbital plane approx. constant
- ejecta velocity perpendicular to orbital plane decreases

Effect of the mass-ratio:Ejecta

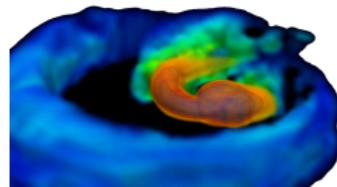

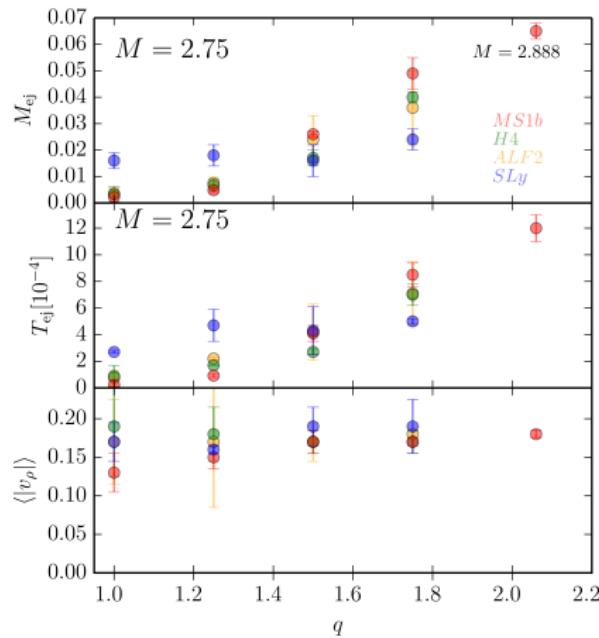

- ejecta mass almost linear in q
- kinetic energy almost linear in q
- ejecta velocity in orbital plane approx. constant
- ejecta velocity perpendicular to orbital plane decreases

Effect of the mass-ratio:Ejecta

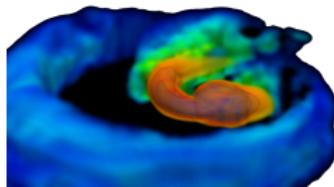

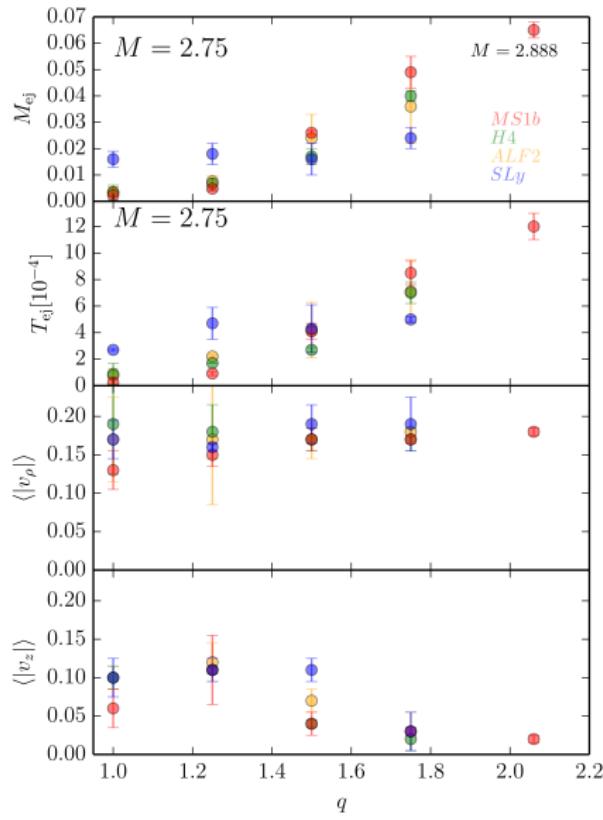

- ejecta mass almost linear in q
- kinetic energy almost linear in q
- ejecta velocity in orbital plane approx. constant
- ejecta velocity perpendicular to orbital plane decreases

Effect of the mass-ratio:Ejecta

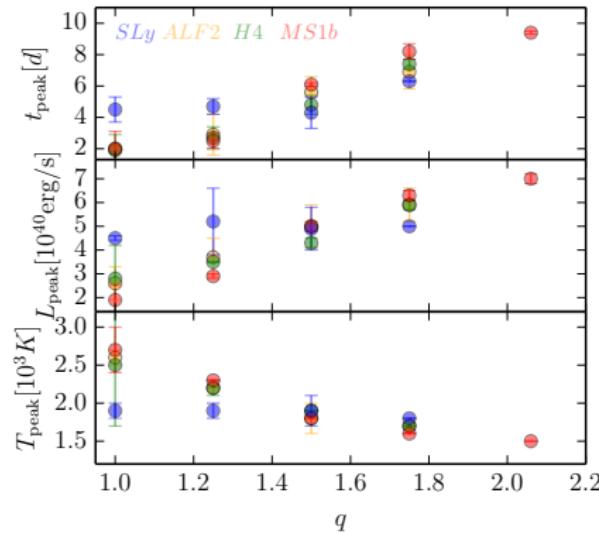

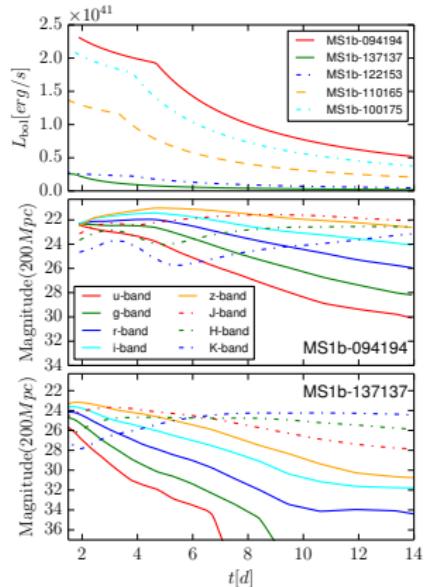

- ejecta mass almost linear in q
- kinetic energy almost linear in q
- ejecta velocity in orbital plane approx. constant
- ejecta velocity perpendicular to orbital plane decreases

Effect of the mass-ratio:Ejecta

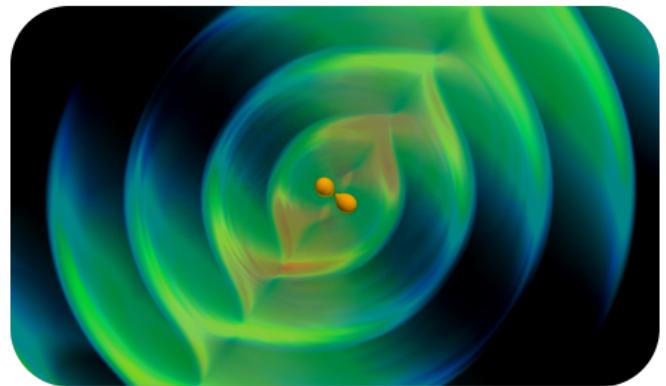

- ejecta mass almost linear in q
- kinetic energy almost linear in q
- ejecta velocity in orbital plane approx. constant
- ejecta velocity perpendicular to orbital plane decreases

Effect of the mass-ratio: EM counterparts

- unequal mass ratios more luminous
- peak luminosity at later times for large q
- temperature at peak smaller for large q
- ejecta velocity perpendicular to orbital plane decreases

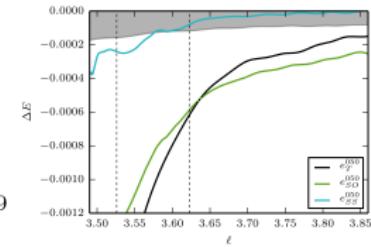

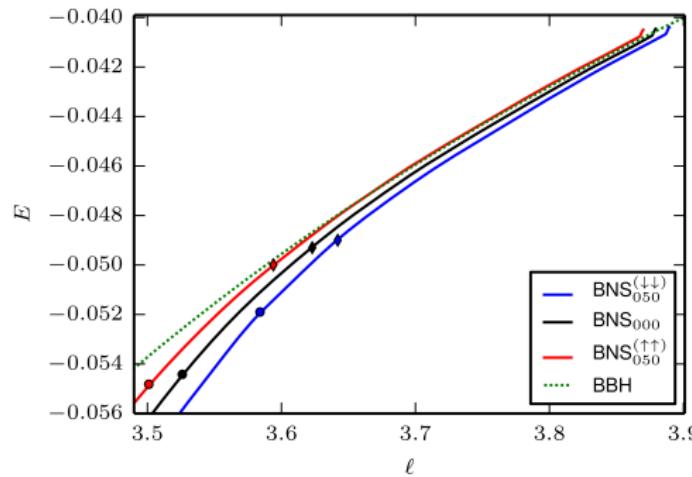

Effect of the Spin

Effect of the Spin

first $E(\ell)$ comparison of BNS/BBH dynamics [Bernuzzi et al, 2013]

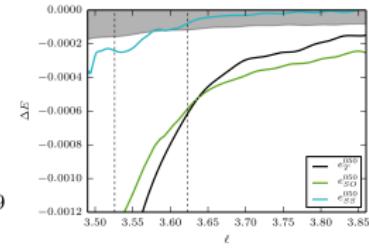

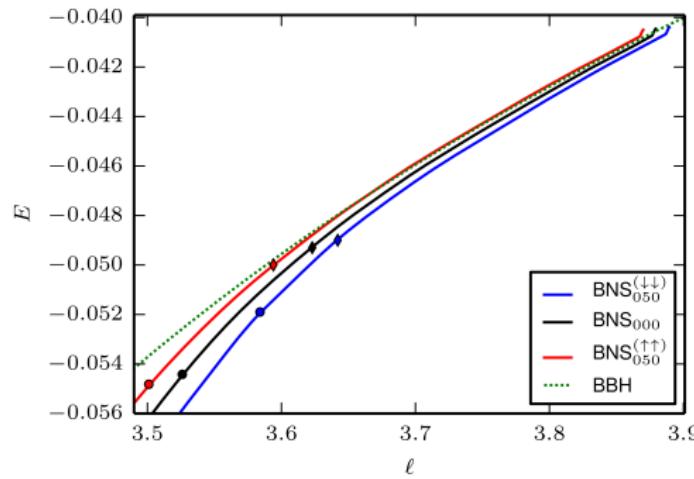

E ... binding energy ℓ .. specific orbital angular momentum

Effect of the Spin

first $E(\ell)$ comparison of BNS/BBH dynamics [Bernuzzi et al, 2013]

E ... binding energy ℓ .. specific orbital angular momentum

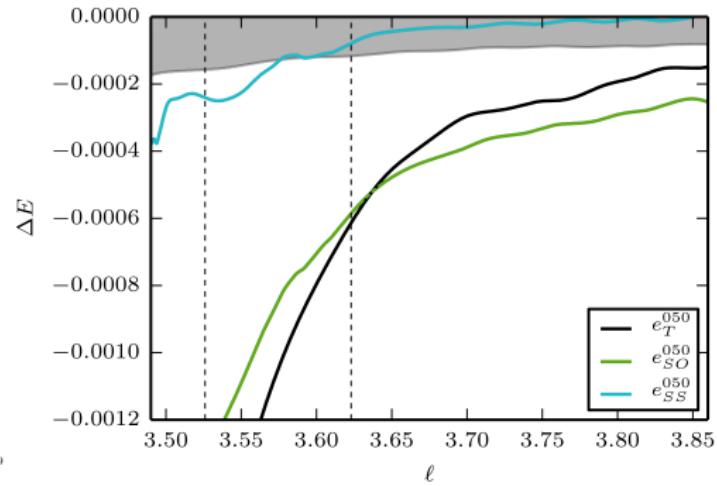

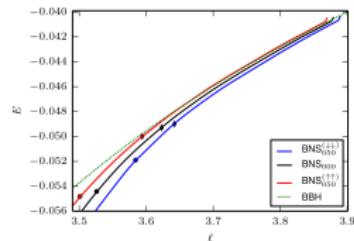

$$E \approx \underbrace{e_0}_{\text{point particle}} + \underbrace{e_T}_{\text{tidal}} + \underbrace{e_{SO}}_{\text{spin-orbit}} + \underbrace{e_{SS}}_{\text{spin-spin}}$$

Effect of the Spin

Effect of
the Spin

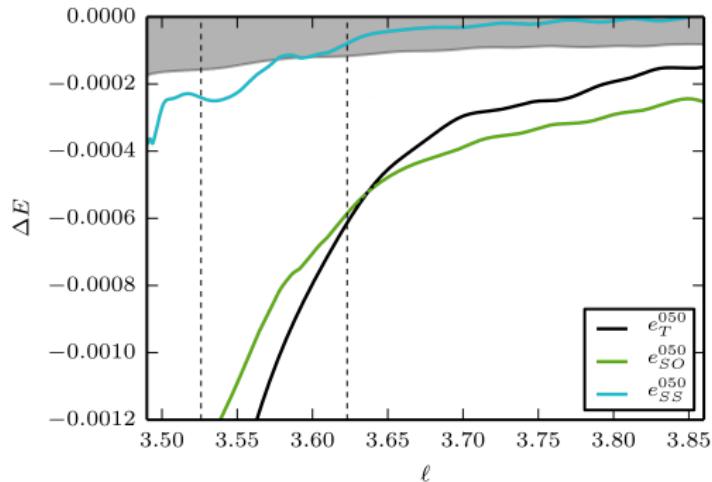

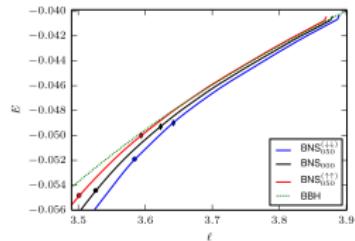

$$E \approx \underbrace{e_0}_{\text{point particle}} + \underbrace{e_T}_{\text{tidal}} + \underbrace{e_{SO}}_{\text{spin-orbit}} + \underbrace{e_{SS}}_{\text{spin-spin}}$$

⇒ for $\chi \sim 0.05$ spin-orbit-term dominant until contact

⇒ spins have to be included for modeling binary pulsar systems

Effect of the Spin: Precession

$M_A = 1.35M_\odot$ and $M_B = 1.11M_\odot$ for SLy-
EOS

	j_A	j_B
(↗↗)	0.13	0.16
(↑↑)	0.08	0.09
(00)	0.00	0.00

E ... binding energy
 ℓ .. specific orbital angular momentum

Summary

- Improvements in the construction of our initial data
- large parameter space study regarding q
 - ejecta mass and luminosity increase for large q
 - GW energy decreases for large q
- first precessing BNS merger
 - influence of precession small compared to spin-orbit effect
